- ☑ **Are always simple and quick to fit**
- ☑ **Are likely to be cheaper than your existing supplier**

Our sales staff

- ☑ **Will work with you to produce the correct packaging for your parts**
- ☑ **Have the technical back-up to test and develop products using the most up-to-date polythene film**

Specialist car seat covers

Marchant's automotive packaging division has 50 years experience in manufacturing protective car seat covers, supplied direct into car manufacturers. Covering front seats, rear seats, squab seats and seat backs.

We have the capability to manufacture almost any shape or size cover – and by elasticating the covers we can provide covers that are durable and easy to remove to make alterations or check anything on the seat.

We can add pockets; slits for manipulators; holes for headrests, side wheels or seat framework; and we can easily print your logo or seat instructions onto covers. By working closely with your seat engineers we provide the cover you need at the price you want.

SIT-RITE™ covers

Our patented SIT-RITE covers have an electrostatic inner coating on the front of the bag that grips onto the seat making sitting on the seat safer – and elastimer polythene on the back of the bag that stretches to fit tightly onto the seat, minimising tearing and maximising protection.

ELASTICATED covers

Our elasticated covers are easy to fit and even easier to remove and re-fit – allowing you to make any changes to the seat or check any parts on the seat.

Elasticated covers are a easy and simple way to cover squab seats.

Bags, tapes, and other packaging products

Because we extrude our polythene which we convert into bags on site we will always be able to give you a competitive price on reels of bags, tapes and packaging products.
