The bin bags and carrier bags are branded as "I Want: the best of both worlds" compostable bags and include all details of how the bags compost. Food grade bags have an outer pack label branding and explaining the bags usage.

Custom size & branded bags

We are able to supply the above size bags, or any other size bags, printed with your details. As well as printing on the bags we are able to custom print your details, branding or logo on the roll and/or case packaging.

Our minimum manufacturing qty's on the refuse sacks are 25 cases of printed bags, however we are able to manufacture just 10 cases for trial purposes. We specialise in strong films, and manufacture very strong compostable bags from 14+ microns. Our bags are available on reels or flatpacked and with or without tie handles.

Full technical specifications of our compostable bags are available on request. See us at www.marchant.co.uk. We are based in Suffolk and you are welcome to book a factory tour.

Our bags

- Are manufactured in the UK to ISO 9000:2001 strict quality specifications
- Will fully compost in 6-10 weeks to water, carbon dioxide and biomass
- Are EN13432 accredited: reg. 7P0191
- Are EU & FDA food contact approved
- Are exceptionally strong at thin gauges. This reduces the amount of material you need, which helps the environment and better enables biodegradation

The materials

This material is made from vegetable starch with other proprietary brand products added to give superior flexibility. It is 100% compostable and suitable for home composting or for collection of compostable waste as part of an authorized collection scheme or industrial compost facilities. In home compost materials will compost as fast as your standard waste.

How the bags should be stored

A degree of care is necessary to ensure that the bags are not exposed to excessive heat or moisture. Keeping the bags inside the box they come in is sufficient. Beyond this sort of 'common sense', no special requirements apply.

Also available

Degradable bags. These fully degrade in 1-2 years. Contact us for details.

Carbon Neutral bags. All the carbon produced in the manufacture and in the actual polythene in these bags is off-set by planting broad leaved trees in the UK. Contact us for details.
