Anti-corrosion VCI packaging for storing & transporting metal parts

RUSTGARD

Cleaner, simpler, cheaper protection against rust - call us today: 01440 765300

Our products

- ☑ Use *Rustgard*® VCI technology to protect your parts against rust
- ☑ Reduce cost in your supply chain
- ☑ Are likely to be cheaper than your existing supplier

Our sales staff

- ☑ Will work with you to produce the correct packaging for your parts, whether in transportation or storage
- ☑ Have the technical back-up to test and develop custom anti-corrosion packaging solutions at a price that is right for you

Why use VCI

Protecting metal parts in your factory doesn't have to mean messy oil or grease coatings that have to be washed off later. Instead, *Rustgard* VCI plastic or paper is a cleaner, simpler and cheaper way to protect against rust.

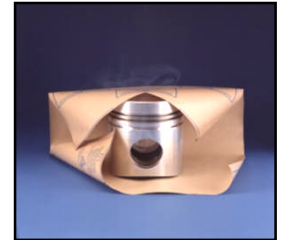

Simply putting parts in a *Rustgard* bag, or wrapping parts in *Rustgard* plastic or paper sheet, stops rust forming on your metals. And since it doesn't involve grease or oil, there's no need to wash parts when you need to use them next. Parts can be delivered trackside whenever and however you need them.

Once wrapped the *Rustgard* materials get to work by infusing the air around the metal with Vapour Corrosion Inhibitor (VCI) particles. The VCI forms a microscopic, undetectable layer on top of the metal, which inhibits the electrostatic process that creates rust. By saturating the air inside the bag VCI materials are able to best penetrate into crevices, slots and otherwise unreachable areas of the metal parts. VCI is environmentally friendly, harmless and undetectable on your metals.

VCI sheets and bags

Rustgard bags and sheets protect metal parts from corrosion throughout transport and storage. By elasticating, adding a drawstring, or an invisible seal we are able to produce a packaging solution that is effective and simple to use.

Emitters, oils, sprays and wipes

A range of *Rustgard* VCI emitters, oils, sprays and wipes is available. These offer continuous corrosion protection to metals in various enclosed environments. Please ask us for product information sheets on each of these.

Custom packaging solutions

We elasticate covers that protect brake discs, flywheels and diff-locks during transportation. We add draw-string and zips to covers that protect motor bikes from rust. We add pockets to bags, use specialist polythene and manufacture in differing colours allowing total protection and easy line-side identification of o-ring parts.

In fact whatever the best packaging solution is to protect your products, we can develop, trial and supply it for you.
